

Ocean Animals

What things can we see in the deep part of the sea? We may find such things as big red crabs, small pink shrimp, green squid, and dark gray clams. Some swim and some crawl on the sea floor. A few grab the sides of rocks and live there all the time. These creatures all need food and salt water to stay alive. If you find one, just look at it and let it stay free. That is how God made them to be.

(Do you have a favorite sea creature? Tell why you like it. Think of the infinite variety of creatures God created and what they need to stay alive.)
